Patent No. 6518256

GENERAL INFORMATION:
APPLICANT: Fan, Liqun
APPLICANT: Fanger, Cary R.
TITLE OF INVENTION: COMPOUNDS OF LUNG CANCER
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
TITLE REPRENCE: 210121.455C8
CURRENT APPLICATION NUMBER: US/09/542,615A
CURRENT APPLICATION NUMBER: US/09/542,615A
NUMBER OF SEQ ID NOS: 350
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 176
LENGTH: 579
APPLICANT: Wang, Tongtong
APPLICANT: Wang, Tongtong
APPLICANT: Fan, Ligun
APPLICANT: Fan, Ligun
APPLICANT: Kalos, Michael D.
APPLICANT: Ranger, Gary R.
TITLE OF INVENTION: COMPOUNDS AND METHODS FOR THERAPY
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
TITLE OF INVENTION: AND DIAGNOSIS OF LUNG CANCER
CURRENT APPLICATION NUMBER: DSCOFT OF SEQ ID NOS: 330
SOFTWARE: FastSEQ for Windows Version 3.0
SOFTWARE: FastSEQ for Windows Version 3.0
SEQ ID NO 176
LENGTH: 579
TYPE: PRT
ORGANISM: Homo sapiens
                                                                                                                                                                                                                                                                                                                                                             579

               The present sequence represents a murine c-myc coding region determinant binding protein (CRD-BP). The presence or absence of a tumor can be determined by determining the levels of CRD-BP present in the suspect tissue, where the CRD-BP shields c-myc RNA from endonucleolytic attack and so prolongs its half-life. The methados are used for diagnossing presence or absence of a tumor in a buhnd, especially breast, colon and pancreatic cancer. They are also used to inhibit cancer cell growth
                                                                                                                                                                                                        91

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    682
                                                                                   This invention describes a novel isolated polypeptide (I) which comprising an immunogenic portion of a lung tumor protein or variant (P2) which have eytostatic activity. The polypeptides and polymucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polymucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                 cancer
                                                                                                                                                                                                                                                                                                                                                                                                                                                     GGCTTTGGCTCTCGGGGTCAGCCCCGGCCAGGGCTCACCTGTGGCAGCGGGGGCCCCAGCC

                                                                                                                                                                                                                                                                                                                                                    fusion
                                                                                                                                                                                                                                                                                                    The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, proteins, proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. AB448959 to AB449300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              ò
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           262
                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human lung tumour proteins. Human lung tumour proteins and polynucleotides have expostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung annear or stimulating an immune response.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     The present invention describes human lung tumour proteins. Human lung tumour proteins and polynuclectides have cytostatic and immunostimulant activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polynucleotides, antibodies, fusion proteins, T cell populations, or antigen presenting cells that express the lung tumour proteins are useful for treating lung cancer or stimulating an immune response. ABM48959 to ABM49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      g
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          The present invention describes isolated human lung carcinoma polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic cativity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for the composition immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligonucleotide to a predetermined cut-off value, and determining the presence of a cancer in predetermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as a marker to indicate the presence or absence of a cancer such as lung cancer.                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 The present invention describes isolated human lung carcinoma polymucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polymucleotide that hybridises to the oligonucleotide and comparing the

The present invention describes isolated human lung carcinoma polyuncleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polyuncleotide that hybridises to the oligonucleotide to a predecermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions, e.g. vaccines. (I) is useful as marker to indicate the presence or absence of a cancer such as lung cancer. ABO92145 to ABO92486 and ABPG1866 to ABPG1992 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             382

                                                                                                                                                                       for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polymucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences; or degenerate variants of the above incleotide sequences; or degenerate variants of the above diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                 The invention describes isolated polynucleotides and polypeptides useful
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   CGGGGAGCCATCATGAAGCTGAATGGCCACCAGTTGGAGAACCATGCCCTGAAGGTCTCC

The invention describes isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynucleotide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; at least 10 contiguous residues of the nucleotide sequences cited above; at sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; as sequence that is at least 75 or 90% identical to nucleotide sequences; or degenerate variants of the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or degenerate variants of the above nucleotide sequences. The composition and methods are useful in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      New isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            Wang A, Skeiky YAW, Li SX, Kalos MD, Henderson RA;

The invention describes isolated polynuclectides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer. A new isolated polynuclectide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above; at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences under highly stringent conditions; a sequence that is at least 75 or 90% identical to the above nucleotide sequences, or degenerate variants of the above nucleotide sequences. The composition and methods are useful in diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence encoded by a human lung tumour cDNA isolated from a lung squamous cell carcinoma that may be useful in the diagnosis and treatment of lung cancer and
                                                                               New isolated polynucleotides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung cancer.
                                                                                                                                                         Example 2; Page 249-251; 296pp; English.

                                                                                                                                                                                                                                                                                                                                                The present invention describes human lung tumour proteins. Human lung activities, and can be used in vaccine production. Compositions comprising the lung tumour proteins, polymucleotides, and can be used in vaccine production. Compositions proteins, T cell populations, or antigen presenting cells that express proteins, T cell populations, or antigen presenting cells that express stimulating an immune response. ABL48559 to ABL49300 and ABB74946 to ABB75070 represent sequences used in the exemplification of the present

The present invention describes isolated human lung carcinoma polypeptides (II). (I) and (II) have cytostatic polynucleotides (I) and polypeptides (II). (I) and (II) have cytostatic activity, and can be used in gene therapy and in vaccines. Compositions comprising (I) or (II) can be used for stimulating an immune response in a patient and for treating lung cancer in a patient. Oligonucleotides of (I) can be used for detecting the presence of a cancer in a patient, by obtaining a biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample from the patient, contacting the biological sample with the oligonucleotide, detecting in the sample, an amount of polynucleotide that hybridises to the oligonucleotide and comparing the predecermined cut-off value, and determining the presence of a cancer in the patient. (I) and (II) are useful in pharmaceutical compositions. (I) contact used as marker to indicate the presence or absence of a cancer such as lung cancer. ABQ20145 to ABQ2146 and ABPG1866 to ABPG1992 represent sequences used in the exemplification of the present
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              þ
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                     196

The invention describes isolated polynuclectides and polypeptides useful for diagnosing, preventing and/or treating cancer, particularly lung deancer. A new isolated polynuclectide comprises: any of the 22 fully defined nucleotide sequences (e.g. 1012, 900 or 2773 bp) given in the specification; complements of the nucleotide sequences cited above, at least 10 contiguous residues of the nucleotide sequences cited above; a sequence that hybridise to any of the nucleotide sequences cited above; the above nucleotide sequences that is at least 75 or 90% identical to the above nucleotide sequences; or degenerate variants of the above nucleotide sequences; or degenerate variants of the above diagnosing, preventing and/or treating cancer, particularly lung cancer, in gene therapy and in vaccines. This is the amino acid sequence of a recombinant human lung tumour associated protein.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                         for diagnosing, cancer.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Wang A, Skeiky YAW, Li SX, Kalos MD, Henderson RA;

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          389
which have cytostatic activity. The polypeptides and polynucleotides are used in compositions and vaccines to inhibit the development of cancer, especially lung cancer, in a patient. Methods described in the invention can be used to monitor the progression of a cancer by carrying out the detection at subsequent time points and comparing the results from the different time points. CD4+ and/or CD8+ T-Cells isolated from a patient are treated with P2, polynucleotides encoding P2 or antigen presenting cells expressing P2 and then administered to the patient to inhibit
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                               CGGGGAGCCATCATGAAGCTGAATGGCCACCAGTTGGAGAACCATGCCCTGAAGGTCTCC

US-09-261-855-2

Squence 2, Application US/09261855A

Patent No. 6255055

GENERAL INFORMATION:

APPLICANT: ROSS, Jeffrey

TITLE OF INVENTION: (CRD-BP) AND ITS NUCLEIC ACID SEQUENCE

FILES REFERENCE: 960296-9313.1

CURRENT APPLICATION NUMBER: US/09/261,855A

NUMBER OF SEQ ID NOS: 46

SOFTWARE: PatentIn Ver. 2.0

SEQ ID NO 2

LENGTH: 577

TYPE: PRT

TYPE: PRT

TYPE: PRT

TYPE: PRT
